

## Retinal Photography

- Retinal imaging is an important tool for the screening and diagnosis of eye problems, such as

retinal detachment, glaucoma, cataracts, retinal holes/retinal tears and age-related macular degeneration, it can also indicate evidence of non-eye diseases, such as diabetes, hypertension and certain cancers.

- The photograph takes a second on each eye and is painless
- We will store your photograph for future comparison.
- You will be able to see inside your own eye !
- This test can be done on all age groups if willing&hellip;..

( Please read below for further technical information or visit Zeiss Retinal Atlas)

view your retina in its entirety as well as record it for future comparison. As well as viewing the health of the eye it also gives a clear indication of the body's vascular state, monitoring conditions such as Blood pressure, Cholesterol and Diabetes. Yes your eyes truly are the window to your health !

Retinal photography is advised for all patients as part of an eye test.

- Diabetic patients
- Glaucoma patients
- Patients with history of retinal disease
- Patients with high prescriptions  
especially short sighted
